

ACTIVITY

of species on the brink

of species on the brink
335 Aves
74 Mammalia
65 Amphibia
41 Reptilia

Throughout Earth's
4.5 BILLION YEARS
current richness of life is
unparalleled

5 MASS EXTINCTIONS
caused by volcanos or astroid
collision led to the loss of
70 TO 95% SPECIES

Despite only 2% of all species
that ever lived, still being alive
**ABSOLUTE NUMBER
OF SPECIES IS
GREATER**
than ever before

Extinction rates today are
**100 TO 1000 TIMES
FASTER**
than historical background rates

Loss of species is
PERMANENT
and has significant implications
for human dependency on
those ecosystems

AMPHIBIANS
have suffered significant
decline and extinction with
ONE FIFTH EXTINCT
already and the remaining
declining rapidly

Small & dwindling populations
**LOSE THEIR
CONTRIBUTION**
to ecosystem functions,
impacting human welfare
